Nameplate data

The pump nameplate identifies the pump by pipe size, pump construction and impeller diameter as shown above. In this example, the nameplate shows a Series e-1510, size 5GB in stainless steel fitted (SSF) construction. The pump was furnished with a 12.15" impeller diameter and a 50 horsepower, 1800 RPM synchronous speed motor. The serial number specifically identifies the unit for future reference.

DO NOT REMOVE THE NAMEPLATE. It is important when ordering replacement parts to furnish complete nameplate data.

The e-1510 pump is furnished with both "Standard Seal" or "Stuffing Box" configuration. The "Standard Seal" pump has no seal designation after the Series number on the nameplate. If the example pump was of "Stuffing Box" configuration, the nameplate would show it to be a e-1510-S or e-1510-PF pump. Parts for "Stuffing Box" type pumps are covered under the CP-209-PL parts list.

To ensure the correct parts are selected, use the following procedure:

1. Determine from nameplate the pump size, seal configuration, pump construction and impeller diameter.
2. Measure shaft sleeve diameter at the seal.
3. Refer to the index for the page number of the parts breakdown for the specific size pump.
4. Select part numbers using the exploded view numbered drawing for identification. Where shaft diameter affects parts selection, use the measurement secured in Step 2.
